Two books for useful work.

A sampler from The App Builder's Bluebook and The Roam Edit.

A QUICK LOOK INSIDE

- Selected pages from two practical, visual learning books.
- One helps you build a useful app with discipline.
- The other helps you turn travel taste into a trusted brand.

CAPSULE BITES

THE APP BUILDER'S BLUEBOOK

55 bite-sized capsules for turning a daily problem into a working app, a credible launch and a real business.

THE PILL EDITION

THE ROAM EDIT

Seventeen digestible lessons for building a travel guide Instagram brand people trust and use.

WHAT YOU'LL SEE

Original title pages, a representative lesson, and a practical toolkit / diagram page from each book.

Keep the pages that make you want to build or go.

THE BLUEBOOK SERIES · EDITION 1.0

THE APP BUILDER'S BLUEBOOK

Capsule Bites to Build a Useful App — from a daily problem to a real business

55 bite-sized capsules · Basic to Advanced · Start to End
with AI, Claude Code and Codex

FOUNDATION | VALIDATE | BUILD | PROTECT | LAUNCH | OPERATE

OCTOBER 2026 · FOR BEGINNERS, OPERATORS, FOUNDERS & PROFESSIONALS

CAPSULE 01 · LEVEL I · BASIC

The New Builder's Advantage

01

THE BITE

AI has lowered the coding barrier. It has not removed the need for an owner.

WHY IT MATTERS You no longer need years of programming or a budget for developers to start. But AI cannot choose your customer, judge whether they will pay, or guarantee that a number or privacy promise is true. That part is yours.

AI can help you…

- Explain an unfamiliar project in plain words
- Draft a first screen or workflow
- Connect a database, payments, email or an API
- Write tests and repair errors
- Refactor messy code and document decisions
- Turn a user request into technical tasks

Only you can decide…

- Which customer matters most
- Whether that customer will pay
- Whether a number is trustworthy
- Whether a privacy promise is true
- What to do when two users want opposite things
- When to stop, narrow or continue

DO THIS

1. Write one line: *"I own the problem, the workflow, the decisions and the evidence."* Pin it above your desk.
2. List what you will delegate to AI (drafting, coding, testing) and what you will never delegate (judgement, trust, money).
3. Treat every AI output as a draft that needs your review.

◆ DAYFLOW IN ACTION

The DayFlow founder lets Claude Code build the task form, but personally decides that every priority must show a plain-English reason, because owners said they distrust black-box ranking.

✗ TRAP TO AVOID

Believing a fast AI build equals a business. Speed of code is not proof of value.

✓ DONE WHEN

You can state in one sentence what you own and what AI assists with.

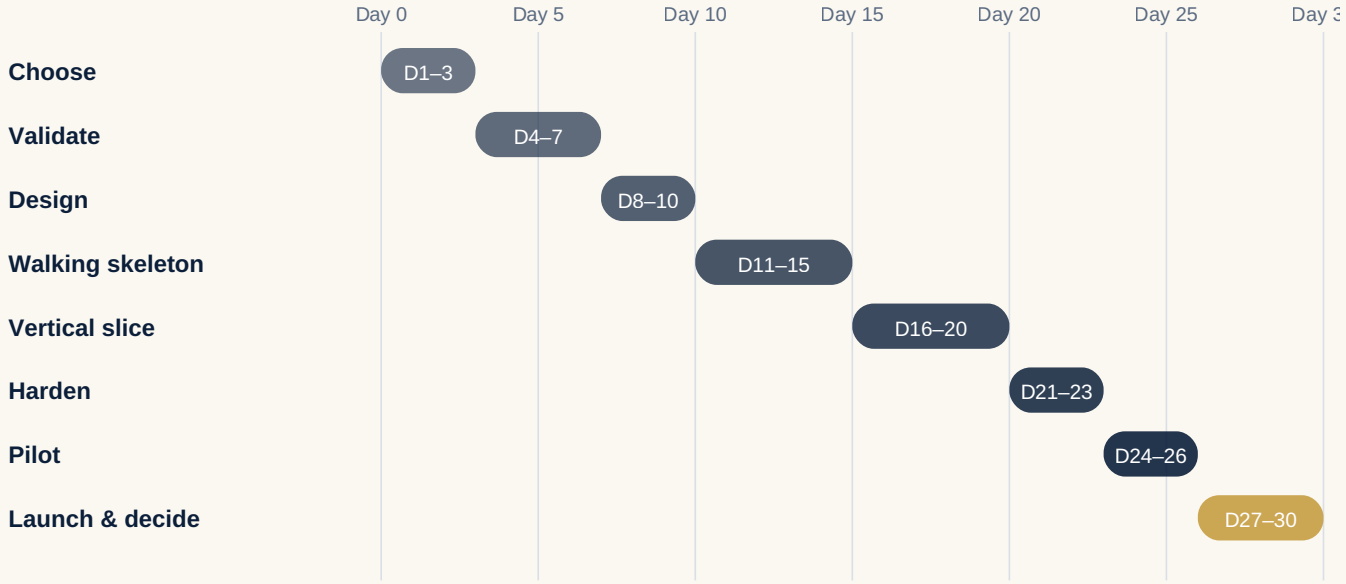

★ LEVEL UP

Keep a short **decisions.md** file from day one. When AI proposes something, record what you accepted and why. It becomes your product memory.

THE TOOLKIT · 02

The 30-Day Build Plan

For one focused person working part-time on a narrow app.

PHASE	WHAT YOU DO
Days 1–3 · Choose	Write three problem statements; score them; pick one audience and workflow; define success evidence; book five conversations
Days 4–7 · Validate	Hold conversations; deliver a manual result; record workarounds and objections; write a one-page explainer; decide whether to prototype
Days 8–10 · Design	Product brief; sketch main screens; define data shape and acceptance criteria; write first CLAUDE.md / Codex instructions
Days 11–15 · Skeleton	Create the project; run locally; one input; one result; first tests; commit a working baseline
Days 16–20 · Slice	Connect persistence; real rule; loading / empty / success / error states; invalid and duplicate inputs; human walkthrough
Days 21–23 · Harden	Review permissions; remove secrets; add analytics or event logs; backup/export path; test a failure and recovery; deploy to staging
Days 24–26 · Pilot	Invite 3–10 users; observe without coaching; record questions; fix the biggest friction; no unrelated features
Days 27–30 · Launch	Publish a clear explanation; invite the next group; review completions and repeat use; ask for payment or commitment; decide: continue, narrow, reposition or stop

> *Success at day 30 is not "the app has many features". It is knowing whether a specific person receives a valuable result — and whether you can reliably deliver it.*

THE PILL EDITION
The Roam Edit
Seventeen digestible lessons for building a travel guide Instagram brand
ONE CHAPTER · ONE PILL · ONE ACTION
A LUXURY LEARNING BOOK

PILL 01 · PART I

Sell Certainty, Not Sunsets

THE 10-SECOND DOSE

People don't follow pretty pictures. They follow whoever makes their next travel decision feel easy.

WHY THIS PILL MATTERS

4-MIN READ

1. Pretty feeds are replaceable; useful feeds are bookmarked.
2. Travel is full of anxiety — every answer you give is a small relief.
3. Utility is the bridge from likes to revenue.

IF YOU REMEMBER ONE THING

Beautiful idea + specific decision + credible detail = useful travel content

SEE IT

The idea in one picture

The four floors of a travel brand — build from the ground up

SPOT THE DIFFERENCE

Weak versus strong

BEFORE · WEAK

10 beautiful places to visit in Italy.

AFTER · STRONG

First trip to Italy with eight nights? Pick two bases, not five. Here's the route, what to cut and where to spend the extra night.

END NOTE / SAMPLE EDITION

This is a sampler.

The full books go further, page by page.

Inside this preview

- selected pages from The App Builder's Bluebook
- selected pages from The Roam Edit — The Pill Edition
- a small taste of the frameworks, prompts and visual tools inside
