Useful work. Better judgement.

Two practical books, one shared operating system: choose a real problem, make the next decision easier, and keep the evidence visible.

01 / BUILD

The App Builder's Bluebook

55 capsules for turning a recurring problem into a useful app, a credible launch and an operable business.

DISCOVER

DELIVER

TRUST

REACH

SURVIVE

02 / ROAM

The Roam Edit

17 pills for turning travel taste into useful content, a loyal audience and a real business.

INSPIRE -> TRUST -> GUIDE -> SELL

A 10-page preview of the ideas, diagrams and actions inside.

askakshay.com/store

HOW TO READ THIS SAMPLER

Read for the move, not the mood

Each book is built as a sequence of small decisions. The sampler keeps that rhythm: orient yourself, see the framework, then try one action before you move on.

01 / SCAN

Find the promise

Read the one-line thesis and the diagram. If you can repeat the idea, it is doing its job.

02 / READ

Notice the sequence

Look for the order: problem -> evidence -> action. The order is the lesson, not decoration.

03 / APPLY

Do one useful thing

Write the sentence, score the idea, or draft the first card. A small action turns a sample into a signal.

THE ANATOMY OF A GOOD PAGE

BITE

One sentence worth carrying.

FRAMEWORK

A model that makes the choice visible.

EXAMPLE

A believable situation, not a slogan.

ACTION

A 15-minute move you can finish today.

THE ONLY RULE

Read one idea. Do the smallest version. Measure what changed. Then decide whether it deserves another page.

A field manual for owning the result

The Bluebook is not a coding course. It is an ownership course for people who want to use AI, Claude Code or Codex without outsourcing judgement.

THE SIX-LEVEL JOURNEY

I **Foundation**
Think like a builder

II **Validate**
Prove, then shape

III **Build**
Ship with AI

IV **Protect**
Data, AI, security

V **Launch**
Users and revenue

VI **Operate**
Run like an owner

THE EDITORIAL PROMISE

A useful app is a repeatable promise delivered to a reachable group of people.

WHAT CHANGES AFTER READING

You stop starting with features and start with a painful, reachable workflow.

You start climbing evidence before you build the polished version.

You keep the human in charge of trust, money, privacy and scope.

THE SHARED STANCE

Evidence
Compliments are a start. Repeat behaviour is stronger.

Control
AI drafts; the owner approves the consequences.

Smallness
A complete narrow slice beats a broad unfinished app.

BLUEBOOK VISUAL FRAMEWORK

Five jobs. One evidence-led build loop.

The Bluebook keeps the builder honest by asking two questions: which job is weakest, and what evidence would move it one rung higher?

THE FIVE JOBS EVERY APP MUST DO

01
Discover
Is this a real problem?

02
Deliver
Does the result help?

03
Trust
Can people rely on it?

04
Reach
Can the right people find it?

05
Survive
Can you operate it?

THE EVIDENCE LADDER

01 Idea in your head

02 Conversation recent problem

03 Manual result they try it

04 Behaviour they share data

05 Return without chasing

06 Commitment pay, refer, ask

THE BUILD LOOP

Inspect
see the current state

Plan
name scope and risk

Change
edit one narrow part

Verify
run the smallest proof

Review
read the diff

Record
update the memory

The loop is the product owner's quality system.

STRONGER EVIDENCE ->

When every job is not equal, the weakest job becomes the next piece of work — not another feature.

Build the smallest credible slice

CAPSULE 15 / BUILD WITH EVIDENCE

THE BITE

One complete outcome through the whole system beats ten disconnected screens.

WHY IT MATTERS

A vertical slice is the smallest path from a real trigger to a real next action. It exposes whether the interface, rules, storage and promise agree before you spend time on the rest of the product.

THE MICRO-BRIEF

Trigger morning starts
Input scattered tasks
Process rank by urgency, impact and effort
Output editable order + reason
Next start the first task

DO THIS TODAY

1. Write the user outcome as four to six verbs from trigger to next action.
2. List only the fields and states this path needs: empty, loading, success and error.
3. Build the thin end-to-end version, then let one real person use it without coaching.

DAYFLOW IN ACTION

The first DayFlow slice is: add task -> save task -> show reason -> mark complete. No login, calendar or AI chat yet.

TRAP TO AVOID

Building every page's layout first, then discovering that the data does not connect.

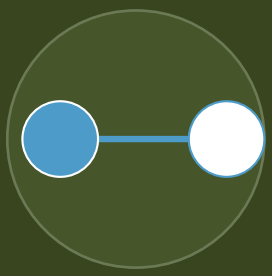
DONE WHEN

A stranger can complete the path and you can point to the evidence that the result helped.

LEVEL UP

Name each slice after the user outcome, not the feature: 'Get today's plan' beats 'Task module'.

Beautiful places. Better routes. No wasted days.



A practical editorial system for turning travel taste into useful content, a loyal audience and a real business.

17 pills / 5 templates / 30-day launch / 90-day rhythm

THE EDITORIAL PROMISE

People do not need another beautiful feed. They need a point of view that reduces uncertainty: where to stay, what to skip, what to book and why it is worth the time.

INSPIRATION	UTILITY	COMMERCE
I want to go there.	I know what to do.	I will pay for more help.

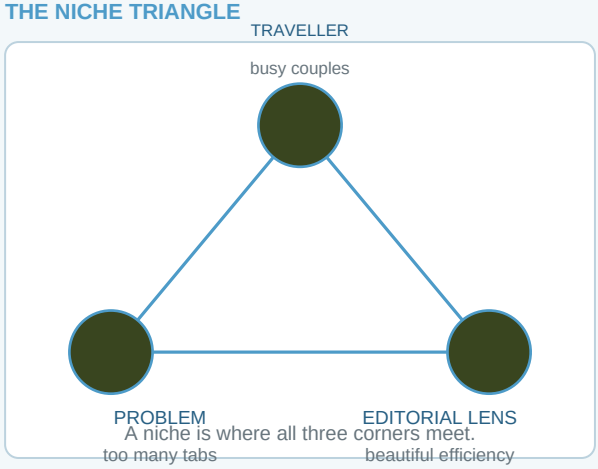
The book's job is not to make you post more. It is to make every post feel more like a decision.

ROAM VISUAL FRAMEWORK

Make the point of view visible

The Roam Edit turns taste into a repeatable editorial machine: choose who you help, promise how you help, then guide one decision at a time.

THE NICHE TRIANGLE



THE CONTENT LADDER

04 Commerce I will pay for more help.

03 Utility This tells me exactly what to do.

02 Trust This account gets my taste.

01 Inspiration I want to go there.

Build upward: beauty earns attention; decisions earn saves; trust makes selling possible.

THE NINE-SWIPE CAROUSEL PATH

1	2	3	4	5	6	7	8	9
Promise	Problem	Principle	Plan	Plan	Plan	Caveat	Summary	CTA

STOP -> GUIDE -> HAND OVER THE PLAN

Make the carousel do one job

PILL 05 / BUILD THE CONTENT MACHINE

THE 10-SECOND DOSE

A carousel is not a slideshow. It walks one traveller from a problem to a plan in nine swipes.

THE COVER FORMULA

PERSON
who is this for?

PAIN
what friction are they feeling?

PROMISE
what will feel easier after the swipe?

THE TWO-SECOND TEST

Show only the cover. Ask: can a stranger name the traveller, the problem and the promised decision? If not, rewrite the cover before you design slide two.

THE NINE-SWIPE DRAFT

1 Promise
A calm Lisbon weekend

2 Problem
Too many bases, too little time

3 Principle
One base, then walk outward

4-6 Plan
Route, timing, trade-off

7 Caveat
Not for travellers who want nightlife

8 Summary
Saveable three-line route

9 CTA
Save or send to your partner

DO IT TODAY / 15 MINUTES

1. Choose one traveller and one decision.
2. Write the cover in one sentence.
3. Cut every slide that does not move the decision forward.

PRACTICAL COMPARISON

Two books. Two starting points. One operating system.

Choose the book that matches the work in front of you. The shared principle is the same: make a promise, create evidence, and build a habit that can survive contact with real people.

START HERE

THE APP BUILDER'S BLUEBOOK

For the person turning a recurring problem into a useful product.

- You have a workflow, not yet a product.
- You want to use AI without losing control.
- You need evidence before features.
- You want one owner-led path from build to launch.

START HERE

THE ROAM EDIT

For the person turning taste, research or travel knowledge into a trusted media brand.

- You have a point of view, not yet a machine.
- You want content that helps people decide.
- You need a niche people can feel.
- You want a clean path from content to product.

WHAT THEY SHARE

1
A clear promise
What useful result will this make easier?

2
A visible framework
Can a reader see the choices and the order?

3
A small action
What can be done today without a committee?

4
A learning loop
What will you measure, repeat or stop?

END NOTE / CONTINUE THE EDIT

Keep the useful parts.

The full books go further: more capsules, more pills, more checklists, and more chances to turn judgement into a repeatable practice.

BUILD

The App Builder's Bluebook

55 capsules. Six levels. One owner-led path from problem to operating product.

ROAM

The Roam Edit

17 pills. Five templates. A 30-day launch and a 90-day rhythm for useful travel media.
